

Persona 1: The Patient

Name: Helen Whitfield

Age: 68

Occupation: Retired

Setting: Community screening visit

Last eye exam: Four years ago

Uses DUAL: Indirectly, through the technician and her doctor

"I want to keep seeing the moments that matter."

Background

Helen wants to stay proactive about her eye health. At 68 she is at higher risk of both cataract and glaucoma, and she knows glaucoma can cause permanent damage before any symptoms appear. She does not use DUAL herself: a technician captures her fundus photo, and she hears the result and the next step from the technician or her doctor.

Goals

- Find possible cataract or glaucoma concerns early
- Understand her eye health clearly
- Know exactly what to do next

Needs

- Plain-language results
- Large, easy-to-read text
- One clear next step

Pain Points

- Confusing medical terminology
- A frightening result with no explanation
- Not knowing who to ask for help

How DUAL Helps

- Separate cataract and glaucoma results: Refer or No concern
- "Uncertain, refer" is a normal result, never a scary error
- "Triage, not diagnosis" shown on every screen

Scenario

Helen attends a screening visit. A technician captures her fundus image and runs DUAL. She receives a simple explanation of the screening result and the recommended next step.

DUAL supports screening and referral decisions. It does not provide a diagnosis.
