

Persona 2: The Screening Technician

Name: Arun Desai

Age: 26

Occupation: Screening Technician

Setting: Rural and community health camps

Equipment: Portable retinal (fundus) camera

Uses DUAL: Directly, for every patient he screens

"I want to help more people get screened, quickly and accurately."

Background

Arun screens a long queue of patients in a single day. He is not an eye specialist, so he needs DUAL to tell him right away whether a photo is usable and what the result means. Every delay or retake costs time, and some patients leave before their results are ready.

Goals

- Capture high-quality images quickly
- Get easy-to-understand screening results
- Screen patients efficiently

Needs

- Immediate image-quality feedback
- A simple, step-by-step workflow
- Clear next-step guidance

Pain Points

- Poor-quality or ungradable images
- Patients leaving before results are ready
- Misinterpreting screening results

How DUAL Helps

- One-photo upload with a left or right eye choice
- One shared model checks cataract and glaucoma at once
- Poor photos return "uncertain, refer", so he never gets stuck

Scenario

Arun captures a patient's fundus image at a screening camp and uploads it to DUAL. The system checks image quality and screens for cataract and glaucoma. He receives a clear result and next step, and can generate a report for clinical review.

DUAL supports screening and referral decisions. It does not provide a diagnosis.
